

We constantly see reports in the news of projects where budgets have blown out significantly or schedules extended dramatically. We have also witnessed trains delivered that don't fit inside tunnels; bridges that collapse before commissioning; payroll systems that fail to work effectively, despite a blowout of 1200% in budget.

What do each of these have in common?

**A failure to effectively integrate the management of risk into the planning and execution of the Project.**

During the Managing Risk in Projects workshop, participants will be guided through the following:

- Risk management definitions
- The risk management environment for projects
- Integrating project risk management into the management of enterprise risk
- A comprehensive understanding of each element of the ISO AS/NZS 31000 process and its application to Project risks
- Developing a contingency budget based on residual risk
- Managing issues during the project

Participants will be guided through the risk management process using real-world examples. In doing so, participants will be able to relate the workshop content to their own workplaces.

Courses will be presented on the same day in three 2-hour sessions utilising live streaming.

## Cost

Participants have the option of undertaking the course as either accredited or non-accredited training. Those that choose the accredited option will be provided an assessment which, upon completion, will result in the awarding of a Certificate of Attainment for **BSBPMG517 – Manage Project Risk**.

Course costs are as follows:

- **Accredited: \$850** (GST Exempt)
- **Non-accredited: \$660** (GST Inclusive)
